

## Difference-in-Differences Estimates by Entity Group and Event Type

Robustness: PostEvent equals 1 from relative week -1

|                      | All events           | Political events     | Terror events     |
|----------------------|----------------------|----------------------|-------------------|
| All entities         | -0.074***<br>(0.023) | -0.107***<br>(0.036) | -0.040<br>(0.030) |
| Political parties    | -0.145*<br>(0.076)   | -0.264**<br>(0.123)  | -0.020<br>(0.065) |
| Organizations/people | -0.049**<br>(0.023)  | -0.060*<br>(0.035)   | -0.040<br>(0.033) |

Cells report the PostEvent coefficient.

Notes: Dependent variable is log weekly spending. PostEvent equals 1 for relative week  $\geq -1$ . All models include entity and data-source fixed effects; stacked models also include event fixed effects. Sample is restricted to Sunday-start weeks from 2020-01-05 through 2025-12-28. \*\*\*  $p < 0.01$ , \*\*  $p < 0.05$ , \*  $p < 0.10$ .
